

Recapitulation: one displacement, two infinitesimal costs in $\mathcal{P}_+(\mathbb{R})$

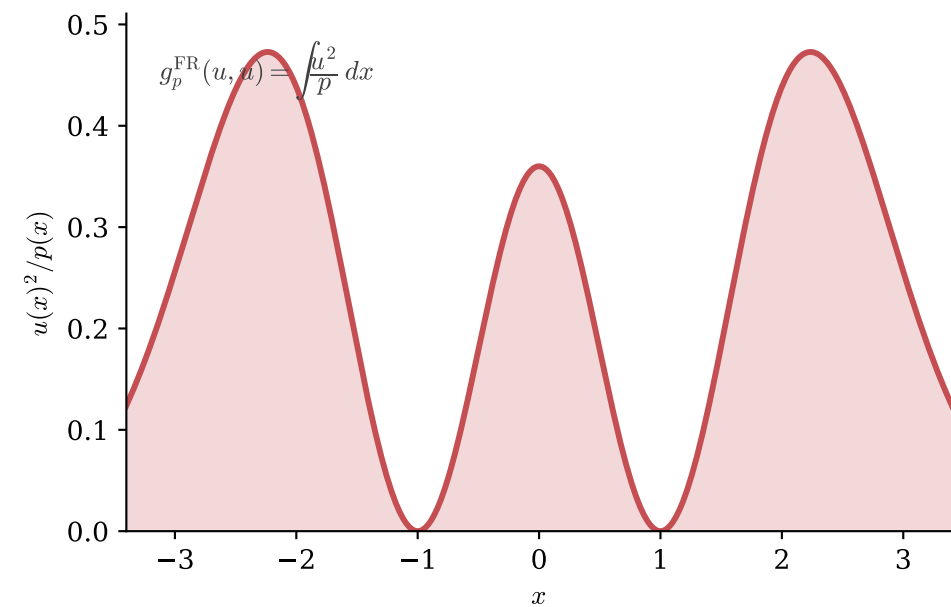

(a) Density p

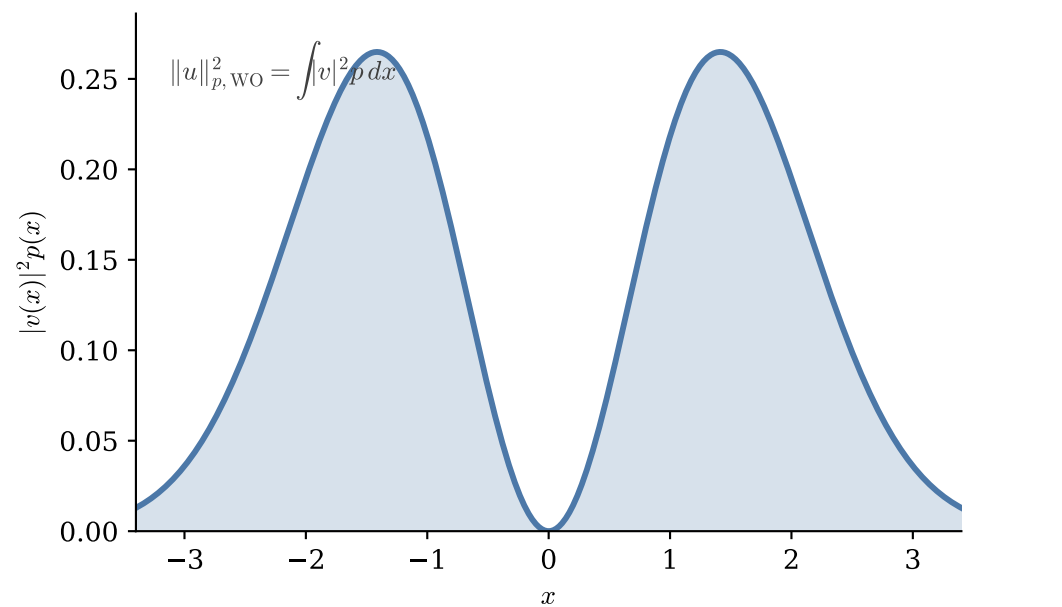

(b) Displacement u and minimal field v

(c) Fisher--Rao sees u^2/p

(d) Wasserstein--Otto sees $|v|^2 p$

Here $\int u dx \approx -4.2e-03$, $g_p^{\text{FR}}(u, u) \approx 1.749$, $\|u\|_{p, \text{WO}}^2 \approx 0.898$.
